

Origami Duckling

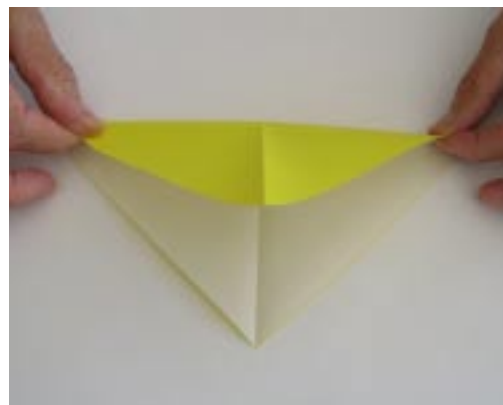

This little duckling is quick and simple to fold, and it is cute too! It is a good beginner's project (although it has more folds and is a little more complicated than the dog and the cat).

1. Start by folding your square in half diagonally, and creasing carefully.

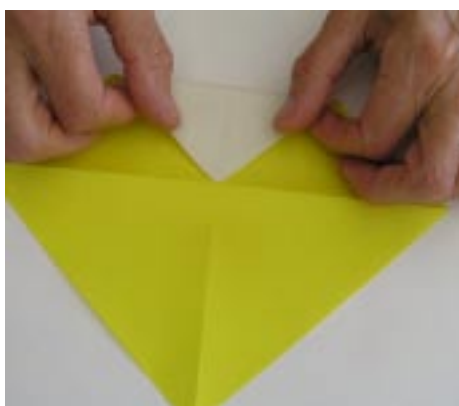

2. Unfold.

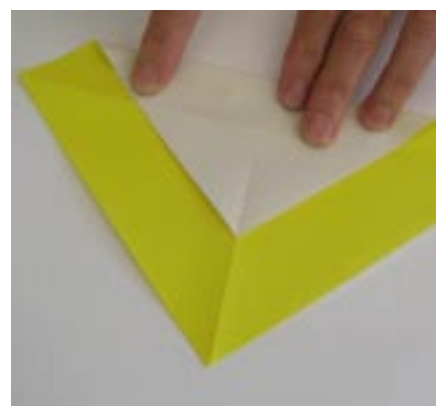

3. Now fold the square in half along the other diagonal, and crease again.

4. Unfold again, and lay your square on the table with the colored side facing up.

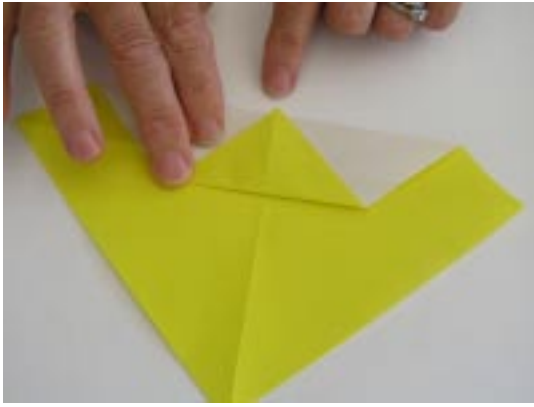

5. Now fold the top point down until it meets the centre point, as shown. Crease, then unfold.

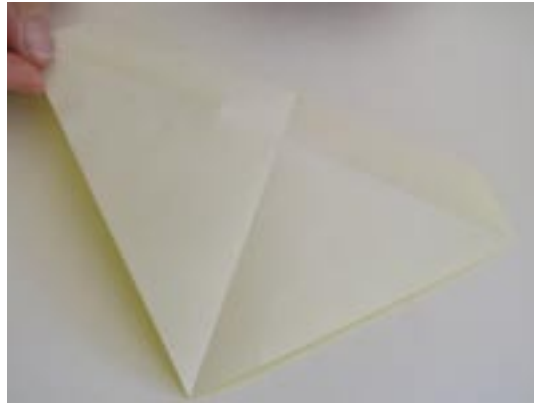

6. Fold the top point down again, this time lining up the crease marks, as shown in the photo above.

7. Now fold the point back up again, so that the point is lined up with the edge of the model.

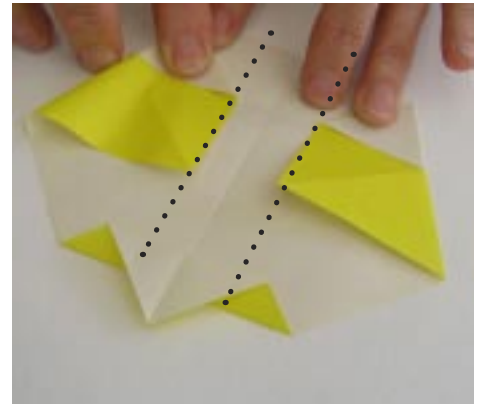

8. Flip the whole thing over.

9. Take the bottom pointed edge and turn it up, as shown ...

10. and then fold it back down again, to form the tail.

11. Fold the edges in, so that the straight edges are parallel to the middle crease but a little outside it.

12. Flip over again, and your duckling is ready to decorate. Draw his eyes with a black marker pen, or use googly eyes if you prefer. You may like to cut a small rectangle of orange paper to stick over his beak.
