

Origami Penguin

These penguins are so gorgeous - and so quick and easy to make once you master the positioning of the folds - that we could happily fold a whole flock!

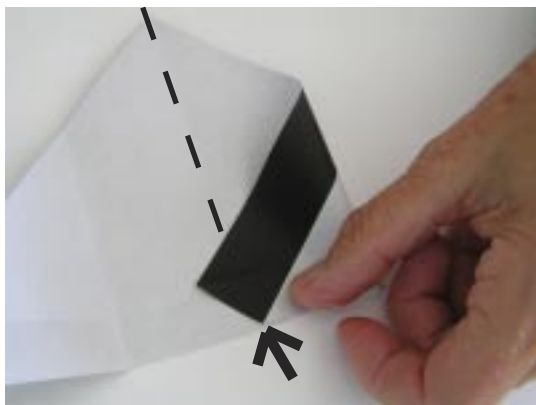

If you haven't got any googly eyes, you can cut small circles out of scraps of paper or use tiny white and black stickers for the same effect.

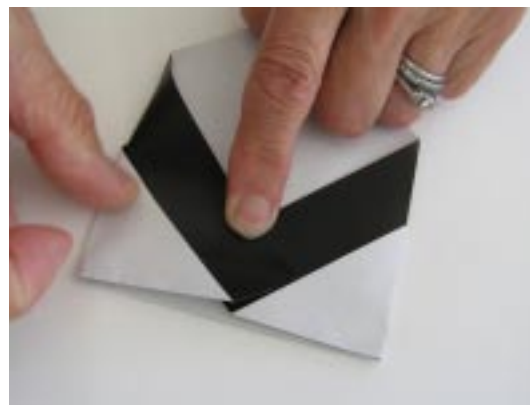

1. With the colored side of your black square facing up and place diagonally in front of you, fold the bottom corner up as in the photo.

2. Crease well. Now turn the top white point down to make the penguin's beak, as shown.

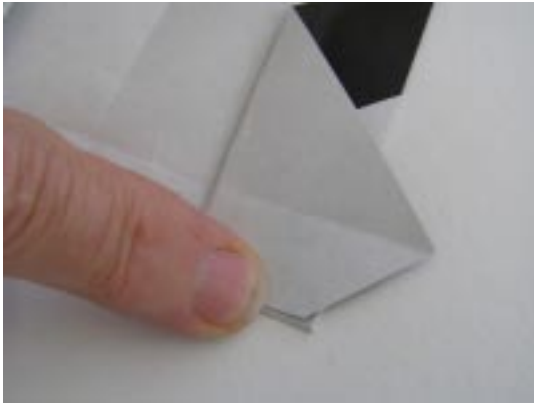

3. Fold one of the corner points in to the middle, lining it up by matching the corner to the middle fold (see arrow above)

4. Do the same with the other corner point. Crease well.

Origami Penguin - Page 2

5. Fold the wing flap back on itself, this time positioning it so that just the tip of the wing peaks out, as shown above.

6. Flip your penguin over, and add his eyes!

7. How can you resist making a penguin family?
